

## Case report of the use of QuikClot® in severe epistaxis.

A 68 years old patient, with hypertension under Plavix®/Clopidogrel presents an uncontrolled epistaxis despite the application of several hemostatic compresses by himself. Admission to the Emergency department. Application of a pre-cut QuikClot® compress with persistence of posterior bleeding. Recovery by posterior drilling with QuikClot® compress. Compression during 3 minutes. Stopping epistaxis. Surveillance and referral to the ENT department.
